

1. Trainee Tool & Die Maker

Job Summary

An entry-level role focused on learning tool and die manufacturing processes, including machining, fitting, assembly, and maintenance under supervision.

Key Responsibilities

- Assist in manufacturing tools, dies, jigs, and fixtures
- Learn basic machining operations (lathe, milling, grinding)
- Support senior tool makers in assembly and fitting
- Interpret basic engineering drawings
- Maintain workplace safety and cleanliness
- Participate in training programs and workshops

Required Skills

- Basic knowledge of mechanical engineering concepts
- Understanding of workshop tools and measuring instruments
- Willingness to learn and attention to detail
- Basic drawing reading skills

Qualification

- ITI / Diploma in Tool & Die Making, Machinist, or Mechanical

Experience

- 0–1 year

Salary (India)

- ₹8,000 – ₹15,000 per month
-

2. Apprentice Tool Maker

Job Summary

A structured training role under apprenticeship programs focusing on practical exposure to tool room operations.

Key Responsibilities

- Work under supervision to learn tool manufacturing
- Perform basic machining and fitting tasks
- Assist in die maintenance and repair work
- Learn to use precision measuring instruments

- Follow apprenticeship curriculum and assessments

Required Skills

- Basic mechanical aptitude
- Discipline and eagerness to learn
- Ability to follow instructions
- Basic workshop safety knowledge

Qualification

- ITI in Tool & Die Maker / Fitter / Machinist

Experience

- Freshers

Salary (India)

- ₹7,000 – ₹12,000 per month (stipend-based)
-

3. Junior Tool Maker

Job Summary

Supports tool manufacturing and repair activities with limited supervision after initial training.

Key Responsibilities

- Assist in manufacturing dies, molds, and fixtures
- Operate basic machines (lathe, drilling, milling)
- Perform fitting, polishing, and finishing tasks
- Support tool trials and adjustments
- Maintain records of tool components

Required Skills

- Basic machining and fitting skills
- Ability to read engineering drawings
- Knowledge of measuring tools (vernier, micrometer)
- Problem-solving mindset

Qualification

- ITI / Diploma in Tool & Die Making

Experience

- 1–2 years

Salary (India)

- ₹12,000 – ₹20,000 per month
-

4. Tool Room Assistant

Job Summary

Provides operational and logistical support in the tool room to ensure smooth workflow and tool availability.

Key Responsibilities

- Maintain tool inventory and records
- Issue and receive tools from production
- Assist in tool cleaning, storage, and handling
- Support tool setup and movement
- Maintain tool room organization

Required Skills

- Basic understanding of tools and equipment
- Organizational and record-keeping skills
- Basic computer knowledge (Excel/logbooks)
- Communication skills

Qualification

- ITI / Diploma / Any technical certification

Experience

- 0–2 years

Salary (India)

- ₹10,000 – ₹18,000 per month
-

5. Die Maintenance Trainee

Job Summary

Focused on learning maintenance, repair, and troubleshooting of dies used in production processes.

Key Responsibilities

- Assist in die inspection and maintenance
- Learn troubleshooting of die-related issues
- Support die assembly and disassembly
- Perform cleaning, lubrication, and minor repairs
- Maintain maintenance logs

Required Skills

- Basic mechanical troubleshooting knowledge
- Interest in maintenance and repair work
- Attention to detail
- Basic tool handling skills

Qualification

- ITI / Diploma in Mechanical / Tool & Die

Experience

- 0–1 year

Salary (India)

- ₹9,000 – ₹16,000 per month
-

6. Mold Shop Helper

Job Summary

Assists mold makers and technicians in mold manufacturing, cleaning, and maintenance activities.

Key Responsibilities

- Assist in mold assembly and disassembly
- Clean and maintain molds and components
- Support machining and polishing operations
- Handle materials and tools safely
- Follow shop floor instructions

Required Skills

- Basic mechanical skills
- Physical stamina and teamwork
- Willingness to learn
- Safety awareness

Qualification

- ITI / Vocational training preferred

Experience

- Freshers / 0–1 year

Salary (India)

- ₹8,000 – ₹14,000 per month

7. Tool & Die Maker

Job Summary

Responsible for manufacturing, assembling, repairing, and maintaining tools, dies, molds, jigs, and fixtures used in production processes.

Key Responsibilities

- Manufacture and assemble tools, dies, molds, and fixtures
- Interpret engineering drawings and CAD models
- Perform machining operations (lathe, milling, grinding, EDM)
- Conduct fitting, finishing, and alignment
- Troubleshoot and repair damaged tools
- Support production during tool trials

Required Skills

- Strong machining and fitting skills
- Drawing interpretation and GD&T basics
- Knowledge of materials and heat treatment
- Precision measurement (micrometer, vernier, gauges)

Qualification

- ITI / Diploma in Tool & Die Making / Mechanical

Experience

- 3–6 years

Salary (India)

- ₹20,000 – ₹40,000 per month
-

8. Die Maker

Job Summary

Specializes in manufacturing and maintaining dies used in stamping, forming, and forging operations.

Key Responsibilities

- Manufacture and assemble stamping/forming dies
- Perform die spotting and alignment
- Repair worn or damaged die components
- Conduct trials and adjustments
- Ensure dimensional accuracy

Required Skills

- Expertise in die construction and fitting
- Knowledge of sheet metal behavior
- Precision machining skills
- Problem-solving ability

Qualification

- ITI / Diploma in Tool & Die Making

Experience

- 3–5 years

Salary (India)

- ₹22,000 – ₹38,000 per month
-

9. Tool Maker

Job Summary

Focuses on producing precision tools, jigs, and fixtures required for manufacturing operations.

Key Responsibilities

- Manufacture tools, gauges, jigs, and fixtures
- Operate CNC/manual machines
- Perform assembly and testing of tools
- Ensure high precision and surface finish
- Maintain tooling records

Required Skills

- Machining and tool fabrication expertise
- Understanding of tolerances and fits
- CAD/CAM basics (preferred)
- Inspection and measurement skills

Qualification

- ITI / Diploma in Tool Making

Experience

- 3–5 years

Salary (India)

- ₹20,000 – ₹35,000 per month
-

10. Mold Maker

Job Summary

Responsible for manufacturing and maintaining molds used in plastic injection, blow molding, and related processes.

Key Responsibilities

- Manufacture and assemble molds
- Perform polishing and finishing of mold cavities
- Repair and maintain molds
- Conduct mold trials and adjustments
- Ensure cooling and ejection systems function properly

Required Skills

- Knowledge of plastic molding processes
- High-precision machining and polishing
- Understanding of mold design
- Troubleshooting skills

Qualification

- ITI / Diploma in Tool & Die / Mold Technology

Experience

- 4–7 years

Salary (India)

- ₹25,000 – ₹45,000 per month
-

11. Jig and Fixture Maker

Job Summary

Designs and manufactures jigs and fixtures to support machining and assembly operations.

Key Responsibilities

- Manufacture jigs, fixtures, and gauges
- Ensure proper alignment and clamping
- Support production efficiency improvements
- Modify existing fixtures based on requirements
- Conduct trials and validations

Required Skills

- Strong understanding of machining processes
- Fixture design basics
- Precision measurement and alignment
- Problem-solving ability

Qualification

- ITI / Diploma in Mechanical / Tool & Die

Experience

- 3–6 years

Salary (India)

- ₹22,000 – ₹38,000 per month
-

12. Press Tool Maker

Job Summary

Specializes in manufacturing tools used in press machines for cutting, bending, and forming sheet metal.

Key Responsibilities

- Manufacture press tools and dies
- Perform die setting and alignment
- Support production press operations
- Conduct tool maintenance and repairs
- Optimize tool performance

Required Skills

- Knowledge of press operations and tooling
- Sheet metal forming expertise
- Machining and fitting skills
- Troubleshooting ability

Qualification

- ITI / Diploma in Tool & Die Making

Experience

- 3–6 years

Salary (India)

- ₹22,000 – ₹40,000 per month
-

13. Progressive Die Maker

Job Summary

Expert in manufacturing complex progressive dies used for high-volume production.

Key Responsibilities

- Manufacture and assemble progressive dies
- Perform die staging and alignment
- Conduct trials and optimize performance
- Troubleshoot multi-stage die issues
- Ensure high precision and repeatability

Required Skills

- Advanced die-making skills
- Understanding of progressive die design
- High precision machining
- Analytical problem-solving

Qualification

- ITI / Diploma in Tool & Die Making

Experience

- 5–8 years

Salary (India)

- ₹30,000 – ₹60,000 per month
-

14. Injection Mold Maker

Job Summary

Specializes in building molds for plastic injection molding processes.

Key Responsibilities

- Manufacture injection molds
- Perform cavity and core finishing
- Assemble and test molds
- Support mold trials and production
- Maintain cooling and ejection systems

Required Skills

- Knowledge of injection molding
- High-precision machining and polishing
- Mold assembly expertise
- Troubleshooting skills

Qualification

- ITI / Diploma in Tool & Die / Plastics Technology

Experience

- 4–7 years

Salary (India)

- ₹28,000 – ₹50,000 per month
-

15. Blow Mold Maker

Job Summary

Responsible for manufacturing molds used in blow molding processes for plastic products.

Key Responsibilities

- Manufacture and assemble blow molds
- Perform polishing and finishing
- Support mold trials and production
- Repair and maintain molds
- Ensure dimensional accuracy

Required Skills

- Knowledge of blow molding processes
- Precision machining and polishing
- Mold design understanding
- Problem-solving ability

Qualification

- ITI / Diploma in Tool & Die / Plastics

Experience

- 4–7 years

Salary (India)

- ₹25,000 – ₹45,000 per month
-

16. Sheet Metal Die Maker

Job Summary

Specializes in designing and manufacturing dies for sheet metal operations such as cutting, bending, and forming.

Key Responsibilities

- Manufacture sheet metal dies
- Perform die setup and alignment
- Conduct trials and adjustments
- Troubleshoot die-related issues
- Ensure production efficiency

Required Skills

- Strong knowledge of sheet metal processes

- Die fitting and machining skills
- Measurement and inspection expertise
- Problem-solving ability

Qualification

- ITI / Diploma in Tool & Die Making

Experience

- 3–6 years

Salary (India)

- ₹22,000 – ₹40,000 per month

17. CNC Tool Maker

Job Summary

Responsible for manufacturing precision tooling components using CNC machines, including milling, turning, and multi-axis machining.

Key Responsibilities

- Program and operate CNC machines (VMC, HMC, CNC lathe)
- Manufacture tooling components such as dies, molds, and fixtures
- Interpret CAD drawings and CAM programs
- Ensure dimensional accuracy and surface finish
- Perform machine setup, tool selection, and offsets
- Troubleshoot machining issues

Required Skills

- CNC programming (G-code, CAM software)
- Strong understanding of tooling materials
- Knowledge of tolerances and GD&T
- Precision measurement skills

Qualification

- ITI / Diploma in CNC / Tool & Die / Mechanical

Experience

- 3–6 years

Salary (India)

- ₹25,000 – ₹50,000 per month
-

18. Manual Machinist (Tool Room)

Job Summary

Operates conventional machines to manufacture and repair tooling components with high precision.

Key Responsibilities

- Operate lathe, milling, drilling, and shaping machines
- Manufacture tooling parts as per drawings
- Perform fitting, drilling, and tapping operations
- Repair worn-out tooling components
- Maintain machine accuracy and cleanliness

Required Skills

- Strong manual machining skills
- Ability to read engineering drawings
- Knowledge of cutting tools and speeds/feeds
- Precision measurement skills

Qualification

- ITI in Machinist / Tool & Die

Experience

- 2–5 years

Salary (India)

- ₹18,000 – ₹30,000 per month
-

19. CNC Machinist (Tooling)

Job Summary

Focuses on machining tooling components using CNC equipment with emphasis on precision and repeatability.

Key Responsibilities

- Set up and operate CNC machines
- Execute machining operations for dies, molds, and fixtures
- Monitor tool wear and replace tools as needed
- Inspect finished components
- Maintain production records

Required Skills

- CNC operation and setup
- Understanding of machining parameters
- Knowledge of tooling materials
- Measurement and inspection skills

Qualification

- ITI / Diploma in CNC / Mechanical

Experience

- 2–5 years

Salary (India)

- ₹20,000 – ₹40,000 per month
-

20. Tool Room Machinist

Job Summary

Works in a tool room environment to produce and maintain high-precision tooling components.

Key Responsibilities

- Manufacture and repair tools, dies, and molds
- Operate both manual and CNC machines
- Perform precision fitting and finishing
- Assist in tool assembly and trials
- Maintain high accuracy standards

Required Skills

- Combined CNC and manual machining skills
- Tool room practices and standards
- High attention to detail
- Measurement expertise

Qualification

- ITI / Diploma in Tool & Die / Machinist

Experience

- 3–6 years

Salary (India)

- ₹22,000 – ₹40,000 per month
-

21. Grinding Specialist (Tooling)

Job Summary

Specializes in precision grinding operations to achieve tight tolerances and fine surface finishes on tooling components.

Key Responsibilities

- Operate surface, cylindrical, and tool & cutter grinding machines
- Achieve high-precision finishes and tolerances
- Inspect ground components
- Maintain grinding wheels and machines
- Ensure quality standards are met

Required Skills

- Expertise in grinding techniques
- Knowledge of tolerances and surface finish
- Understanding of materials and heat treatment
- Precision measurement skills

Qualification

- ITI / Diploma in Machinist / Tool & Die

Experience

- 3–7 years

Salary (India)

- ₹25,000 – ₹45,000 per month
-

22. EDM Operator (Wire Cut / Sinker EDM)

Job Summary

Operates EDM machines to produce intricate shapes and high-precision components for tooling.

Key Responsibilities

- Set up and operate Wire Cut EDM / Sinker EDM machines
- Prepare electrodes and fixtures
- Execute cutting programs
- Monitor machining process and accuracy
- Maintain EDM machines and consumables

Required Skills

- Knowledge of EDM processes
- CNC/EDM programming basics
- Precision measurement and inspection
- Understanding of tooling materials

Qualification

- ITI / Diploma in Tool & Die / CNC / Mechanical

Experience

- 2–5 years

Salary (India)

- ₹22,000 – ₹40,000 per month
-

23. Lathe / Milling Machine Operator (Tool Room)

Job Summary

Operates lathe and milling machines to manufacture tooling components in a tool room environment.

Key Responsibilities

- Perform turning and milling operations

- Prepare machine setups and fixtures
- Produce components as per drawings
- Inspect parts for accuracy
- Maintain machine and tools

Required Skills

- Lathe and milling machine operation
- Knowledge of cutting tools and machining parameters
- Drawing reading skills
- Measurement and inspection

Qualification

- ITI in Machinist / Turner / Tool & Die

Experience

- 2–4 years

Salary (India)

- ₹18,000 – ₹30,000 per month

24. Tool Design Engineer

Job Summary

Designs tools, jigs, fixtures, and gauges required for manufacturing processes, ensuring efficiency, accuracy, and cost-effectiveness.

Key Responsibilities

- Design tools, fixtures, and gauges using CAD software
- Prepare 2D drawings and 3D models
- Select materials and define tolerances
- Collaborate with production and tool room teams
- Support tool trials and modifications
- Ensure manufacturability and cost optimization

Required Skills

- CAD software (AutoCAD, SolidWorks, CATIA, NX)
- Understanding of machining and manufacturing processes
- GD&T and tolerance stack-up knowledge
- Problem-solving and design analysis

Qualification

- Diploma / B.E / B.Tech in Mechanical Engineering

Experience

- 2–5 years

Salary (India)

- ₹25,000 – ₹50,000 per month
-

25. Die Design Engineer

Job Summary

Specializes in designing dies for stamping, forming, and forging applications.

Key Responsibilities

- Design stamping and forming dies
- Prepare strip layout and die assembly drawings
- Define clearances, tolerances, and material flow
- Collaborate with die makers and production teams
- Optimize die design for high-volume production
- Support die trials and debugging

Required Skills

- Strong knowledge of sheet metal processes
- Die design software (CATIA, NX, SolidWorks)
- Understanding of press operations
- Analytical and troubleshooting skills

Qualification

- Diploma / B.E / B.Tech in Mechanical

Experience

- 3–6 years

Salary (India)

- ₹30,000 – ₹60,000 per month
-

26. Mold Design Engineer

Job Summary

Designs molds for plastic injection, blow molding, and related processes.

Key Responsibilities

- Design mold structures, cavities, and cores
- Develop cooling and ejection systems
- Perform mold flow analysis (preferred)
- Prepare detailed manufacturing drawings
- Coordinate with mold makers and production teams
- Optimize mold performance and cycle time

Required Skills

- Mold design expertise
- Knowledge of plastics and molding processes
- CAD software (NX, SolidWorks, Creo)
- Mold flow analysis tools (Moldflow – preferred)

Qualification

- Diploma / B.E / B.Tech in Mechanical / Plastics

Experience

- 3–7 years

Salary (India)

- ₹35,000 – ₹70,000 per month
-

27. CAD/CAM Tooling Engineer

Job Summary

Responsible for creating CAD models and CAM programs for machining tooling components.

Key Responsibilities

- Develop 3D models and 2D drawings
- Generate CNC programs using CAM software
- Optimize machining strategies and tool paths
- Simulate machining processes
- Support CNC machining and troubleshooting
- Maintain CAD/CAM documentation

Required Skills

- CAD/CAM software (NX CAM, Mastercam, PowerMill)
- CNC programming knowledge
- Understanding of machining processes
- Analytical thinking

Qualification

- Diploma / B.E / B.Tech in Mechanical

Experience

- 2–6 years

Salary (India)

- ₹30,000 – ₹65,000 per month
-

28. Tool Development Engineer

Job Summary

Leads the development and improvement of tools and dies for new product launches and process enhancements.

Key Responsibilities

- Develop new tools and dies based on product requirements
- Coordinate with design, production, and quality teams
- Conduct feasibility studies and cost analysis
- Oversee tool trials and validation
- Improve tool performance and life
- Manage tooling projects

Required Skills

- Strong knowledge of tooling processes
- Project management skills
- Analytical and problem-solving ability
- Cross-functional coordination

Qualification

- B.E / B.Tech in Mechanical

Experience

- 4–8 years

Salary (India)

- ₹40,000 – ₹80,000 per month
-

29. Product Tooling Engineer

Job Summary

Responsible for designing and developing tooling solutions specific to product manufacturing requirements.

Key Responsibilities

- Analyze product designs for tooling feasibility
- Develop tooling concepts and designs
- Work closely with product design and manufacturing teams
- Ensure tooling meets quality and cost targets
- Support production and resolve tooling issues
- Drive continuous improvement

Required Skills

- Product and tooling integration knowledge
- CAD/design expertise
- Manufacturing process understanding
- Problem-solving skills

Qualification

- B.E / B.Tech in Mechanical / Production

Experience

- 3–7 years

Salary (India)

- ₹35,000 – ₹75,000 per month
-

30. Reverse Engineering Specialist (Tooling)

Job Summary

Recreates tooling designs from existing physical components using measurement and scanning technologies.

Key Responsibilities

- Analyze and measure existing tools/components
- Use 3D scanning and CAD software to recreate designs
- Prepare accurate models and drawings
- Improve existing designs where required
- Support repair, duplication, and redesign of tooling
- Collaborate with manufacturing teams

Required Skills

- Reverse engineering tools (3D scanning, CAD)
- Strong measurement and inspection skills
- CAD modeling expertise
- Analytical thinking

Qualification

- Diploma / B.E / B.Tech in Mechanical

Experience

- 3–6 years

Salary (India)

- ₹35,000 – ₹70,000 per month

31. Tool Maintenance Technician

Job Summary

Responsible for routine maintenance, inspection, and minor repairs of tools, dies, molds, jigs, and fixtures to ensure smooth production operations.

Key Responsibilities

- Perform routine inspection and maintenance of tools and dies
- Clean, lubricate, and replace worn components
- Assist in tool setup and alignment
- Identify early signs of wear or damage
- Maintain maintenance logs and records
- Support breakdown maintenance activities

Required Skills

- Basic mechanical and troubleshooting skills
- Knowledge of tooling components and assemblies

- Familiarity with hand tools and measuring instruments
- Attention to detail

Qualification

- ITI / Diploma in Tool & Die / Mechanical

Experience

- 1–3 years

Salary (India)

- ₹15,000 – ₹28,000 per month
-

32. Die Maintenance Engineer

Job Summary

Responsible for maintaining and repairing dies used in stamping, forming, and forging operations to ensure production efficiency and quality.

Key Responsibilities

- Perform preventive and corrective maintenance on dies
- Diagnose and troubleshoot die-related issues
- Conduct die assembly, disassembly, and alignment
- Ensure dimensional accuracy and surface finish
- Coordinate with production and quality teams
- Improve die life and reduce downtime

Required Skills

- Strong knowledge of die construction and sheet metal processes
- Troubleshooting and root cause analysis
- Precision measurement and fitting skills
- Understanding of press operations

Qualification

- Diploma / B.E / B.Tech in Mechanical / Tool & Die

Experience

- 3–6 years

Salary (India)

- ₹25,000 – ₹50,000 per month
-

33. Mold Maintenance Engineer

Job Summary

Handles maintenance, repair, and optimization of molds used in plastic injection and blow molding processes.

Key Responsibilities

- Perform mold maintenance and repair
- Inspect cavities, cores, cooling channels, and ejection systems
- Troubleshoot molding defects related to tooling
- Conduct mold trials and adjustments
- Maintain mold history and documentation
- Improve mold performance and cycle time

Required Skills

- Knowledge of plastic molding processes
- Mold assembly and troubleshooting skills
- Precision inspection techniques
- Problem-solving ability

Qualification

- Diploma / B.E / B.Tech in Mechanical / Plastics

Experience

- 3–7 years

Salary (India)

- ₹30,000 – ₹60,000 per month
-

34. Tool Repair Technician

Job Summary

Specializes in repairing damaged or worn tools, dies, and molds to restore functionality and extend tool life.

Key Responsibilities

- Repair worn or damaged tooling components
- Perform welding, grinding, and machining repairs
- Replace inserts and worn parts
- Reassemble and test repaired tools
- Maintain repair records
- Support emergency breakdown repairs

Required Skills

- Strong repair and reconditioning skills
- Knowledge of welding and machining techniques
- Understanding of tooling materials
- Precision measurement skills

Qualification

- ITI / Diploma in Tool & Die / Machinist

Experience

- 2–5 years

Salary (India)

- ₹20,000 – ₹40,000 per month
-

35. Tool Room Maintenance Engineer

Job Summary

Oversees maintenance activities within the tool room, ensuring tools and machines are in optimal working condition.

Key Responsibilities

- Plan and execute maintenance schedules
- Supervise tool maintenance and repair activities
- Ensure availability of tools for production
- Manage spare parts and inventory
- Coordinate with production and quality teams
- Implement continuous improvement initiatives

Required Skills

- Tool room operations knowledge
- Maintenance planning and management
- Leadership and coordination skills
- Problem-solving and analytical thinking

Qualification

- Diploma / B.E / B.Tech in Mechanical

Experience

- 4–8 years

Salary (India)

- ₹35,000 – ₹70,000 per month
-

36. Preventive Maintenance Engineer (Tooling)

Job Summary

Focuses on planning and executing preventive maintenance strategies to minimize tool failures and downtime.

Key Responsibilities

- Develop and implement preventive maintenance plans
- Schedule regular inspections and servicing
- Analyze failure trends and improve maintenance strategies
- Maintain maintenance records and KPIs
- Coordinate with tool room and production teams
- Ensure compliance with safety and quality standards

Required Skills

- Preventive and predictive maintenance knowledge
- Data analysis and reporting
- Root cause analysis
- Planning and organizational skills

Qualification

- Diploma / B.E / B.Tech in Mechanical / Production

Experience

- 3–7 years

Salary (India)

- ₹30,000 – ₹65,000 per month

37. Tool Room Quality Inspector

Job Summary

Responsible for inspecting tools, dies, molds, jigs, and fixtures to ensure they meet design specifications and quality standards before production use.

Key Responsibilities

- Inspect tooling components using measuring instruments
- Verify dimensions against engineering drawings
- Perform visual and functional inspections
- Identify defects and non-conformities
- Maintain inspection reports and records
- Support corrective and preventive actions

Required Skills

- Knowledge of inspection techniques and standards
- Proficiency with measuring tools (vernier, micrometer, gauges)
- Basic GD&T understanding
- Attention to detail

Qualification

- ITI / Diploma in Mechanical / Tool & Die

Experience

- 1–3 years

Salary (India)

- ₹15,000 – ₹28,000 per month
-

38. Die Inspection Engineer

Job Summary

Ensures dies used in manufacturing processes meet dimensional accuracy and functional requirements.

Key Responsibilities

- Inspect die components and assemblies
- Verify clearances, alignment, and tolerances
- Conduct trial inspections during die testing
- Analyze defects related to die quality

- Collaborate with design and production teams
- Maintain quality documentation

Required Skills

- Knowledge of die construction and sheet metal processes
- GD&T and tolerance analysis
- Inspection and measurement expertise
- Analytical problem-solving

Qualification

- Diploma / B.E / B.Tech in Mechanical

Experience

- 3–6 years

Salary (India)

- ₹25,000 – ₹50,000 per month
-

39. Mold Quality Engineer

Job Summary

Responsible for ensuring the quality of molds used in plastic manufacturing processes.

Key Responsibilities

- Inspect mold components (cavities, cores, inserts)
- Validate mold performance during trials
- Identify and resolve mold-related defects
- Ensure compliance with quality standards
- Maintain inspection and validation reports
- Work with production to improve mold quality

Required Skills

- Knowledge of plastic molding and mold construction
- Inspection and validation techniques
- Problem-solving and root cause analysis
- Attention to detail

Qualification

- Diploma / B.E / B.Tech in Mechanical / Plastics

Experience

- 3–7 years

Salary (India)

- ₹30,000 – ₹60,000 per month
-

40. Tool Validation Engineer

Job Summary

Validates tools and dies to ensure they meet design intent, functionality, and production readiness.

Key Responsibilities

- Conduct tool trials and validation processes
- Verify dimensional accuracy and performance
- Develop validation plans and reports
- Identify issues and recommend improvements
- Coordinate with design, production, and quality teams
- Ensure compliance with industry standards

Required Skills

- Tooling validation and testing knowledge
- GD&T and inspection expertise
- Analytical and problem-solving skills
- Documentation and reporting

Qualification

- B.E / B.Tech in Mechanical / Production

Experience

- 3–6 years

Salary (India)

- ₹35,000 – ₹70,000 per month
-

41. First Article Inspection (FAI) Engineer (Tooling)

Job Summary

Responsible for conducting first article inspections to verify that tooling and initial production meet design specifications.

Key Responsibilities

- Perform first article inspections on tooling and components
- Compare manufactured parts with design drawings
- Prepare FAI reports and documentation
- Identify deviations and initiate corrective actions
- Work with production and design teams for improvements
- Ensure compliance with customer and industry standards

Required Skills

- FAI process knowledge (AS9102 or equivalent standards preferred)
- GD&T and drawing interpretation
- Measurement and inspection expertise
- Documentation skills

Qualification

- Diploma / B.E / B.Tech in Mechanical

Experience

- 2–5 years

Salary (India)

- ₹30,000 – ₹65,000 per month
-

42. CMM Inspector (Tooling Components)

Job Summary

Operates Coordinate Measuring Machines (CMM) to inspect complex tooling components with high precision.

Key Responsibilities

- Program and operate CMM machines
- Inspect components using 3D measurement techniques

- Analyze measurement data and generate reports
- Ensure compliance with tolerances and specifications
- Maintain CMM equipment and calibration records
- Support quality audits and validations

Required Skills

- CMM programming (PC-DMIS, Zeiss Calypso, etc.)
- Strong GD&T knowledge
- Precision measurement expertise
- Analytical skills

Qualification

- ITI / Diploma / B.E in Mechanical

Experience

- 2–6 years

Salary (India)

- ₹25,000 – ₹55,000 per month

43. Tool Room Production Engineer

Job Summary

Responsible for planning, coordinating, and executing tool room production activities to ensure timely delivery of tools, dies, molds, and fixtures.

Key Responsibilities

- Plan daily and weekly tool room production schedules
- Coordinate with design, machining, and assembly teams
- Monitor production progress and meet delivery timelines
- Optimize machining processes and resource utilization
- Ensure quality standards are maintained
- Resolve production-related issues

Required Skills

- Tool room operations and workflow knowledge
- Production planning and scheduling
- Basic CNC and machining knowledge
- Problem-solving and coordination skills

Qualification

- Diploma / B.E / B.Tech in Mechanical / Production

Experience

- 3–6 years

Salary (India)

- ₹30,000 – ₹60,000 per month
-

44. Tooling Production Supervisor

Job Summary

Supervises shop floor activities related to tooling manufacturing, ensuring productivity, quality, and safety.

Key Responsibilities

- Supervise tool room operators and machinists
- Allocate tasks and monitor workforce performance
- Ensure adherence to production plans
- Maintain quality and safety standards
- Handle shift operations and reporting
- Coordinate with maintenance and quality teams

Required Skills

- Leadership and team management
- Shop floor operations knowledge
- Problem-solving and decision-making
- Communication and coordination

Qualification

- Diploma / B.E in Mechanical

Experience

- 4–8 years

Salary (India)

- ₹25,000 – ₹50,000 per month
-

45. Die Casting Tooling Engineer

Job Summary

Responsible for tooling used in die casting processes, ensuring efficiency, durability, and product quality.

Key Responsibilities

- Develop and maintain die casting tooling
- Support die trials and process optimization
- Analyze defects and improve tooling performance
- Coordinate with production and quality teams
- Ensure proper cooling and ejection systems
- Monitor tool life and maintenance

Required Skills

- Knowledge of die casting processes
- Tool design and maintenance understanding
- Problem-solving and defect analysis
- Material and thermal behavior knowledge

Qualification

- B.E / B.Tech in Mechanical / Production

Experience

- 3–7 years

Salary (India)

- ₹35,000 – ₹70,000 per month
-

46. Injection Molding Tooling Engineer

Job Summary

Handles tooling for injection molding operations, ensuring high-quality plastic component production.

Key Responsibilities

- Manage injection mold tooling
- Support mold trials and process setup
- Troubleshoot molding defects
- Optimize cycle time and tool performance

- Coordinate with design and production teams
- Maintain tooling documentation

Required Skills

- Injection molding process knowledge
- Mold design and maintenance expertise
- Problem-solving and analytical skills
- Understanding of plastics materials

Qualification

- B.E / B.Tech in Mechanical / Plastics

Experience

- 3–7 years

Salary (India)

- ₹35,000 – ₹75,000 per month
-

47. Stamping Tooling Engineer

Job Summary

Responsible for tooling used in sheet metal stamping processes, ensuring production efficiency and quality.

Key Responsibilities

- Develop and maintain stamping tools and dies
- Support press setup and production runs
- Analyze defects such as burrs, wrinkles, and cracks
- Optimize tooling performance and life
- Coordinate with design and quality teams
- Conduct tool trials and improvements

Required Skills

- Knowledge of stamping and forming processes
- Tooling design and maintenance understanding
- Troubleshooting and analytical skills
- GD&T and inspection knowledge

Qualification

- B.E / B.Tech in Mechanical / Production

Experience

- 3–6 years

Salary (India)

- ₹30,000 – ₹65,000 per month
-

48. Tooling Process Engineer

Job Summary

Focuses on optimizing manufacturing processes related to tooling for improved productivity, quality, and cost efficiency.

Key Responsibilities

- Develop and optimize tooling processes
- Analyze production data and improve efficiency
- Implement process improvements and cost reduction initiatives
- Standardize machining and assembly processes
- Support new product/tool introduction
- Ensure compliance with quality standards

Required Skills

- Process engineering and optimization
- Data analysis and problem-solving
- Knowledge of machining and tooling processes
- Lean manufacturing concepts

Qualification

- B.E / B.Tech in Mechanical / Production

Experience

- 3–7 years

Salary (India)

- ₹35,000 – ₹70,000 per month

49. Tool Room Supervisor

Job Summary

Oversees daily tool room operations, ensuring efficient production, quality compliance, and workforce coordination.

Key Responsibilities

- Supervise tool room machinists, technicians, and operators
- Assign tasks and monitor daily production activities
- Ensure adherence to production schedules
- Maintain quality and safety standards
- Coordinate with design, maintenance, and production teams
- Handle shift planning and reporting

Required Skills

- Strong knowledge of tool room operations
- Leadership and team management
- Problem-solving and decision-making
- Communication and coordination

Qualification

- Diploma / B.E in Mechanical / Tool & Die

Experience

- 5–8 years

Salary (India)

- ₹30,000 – ₹60,000 per month
-

50. Tool Room Manager

Job Summary

Responsible for overall management of tool room operations, including production, maintenance, quality, and workforce management.

Key Responsibilities

- Manage end-to-end tool room operations
- Plan production schedules and resource allocation
- Ensure timely delivery of tools, dies, and molds
- Control costs and optimize productivity
- Lead and develop tool room teams
- Implement continuous improvement initiatives
- Ensure compliance with safety and quality standards

Required Skills

- Tool room management expertise
- Leadership and strategic planning
- Budgeting and cost control
- Problem-solving and decision-making

Qualification

- Diploma / B.E / B.Tech in Mechanical

Experience

- 8–15 years

Salary (India)

- ₹50,000 – ₹1,20,000 per month
-

51. Die Shop Manager

Job Summary

Manages die manufacturing and maintenance operations, ensuring high-quality die production and minimal downtime.

Key Responsibilities

- Oversee die manufacturing, repair, and maintenance
- Ensure die performance and longevity
- Manage shop floor operations and workforce
- Coordinate with production and quality teams
- Optimize die processes and reduce downtime
- Implement best practices in die management

Required Skills

- Expertise in die manufacturing and maintenance
- Leadership and operations management
- Troubleshooting and process optimization
- Strong coordination skills

Qualification

- Diploma / B.E / B.Tech in Mechanical / Tool & Die

Experience

- 8–15 years

Salary (India)

- ₹50,000 – ₹1,10,000 per month
-

52. Tooling Project Manager

Job Summary

Leads tooling-related projects from concept to completion, ensuring delivery within scope, time, and budget.

Key Responsibilities

- Plan and manage tooling projects
- Define project scope, timelines, and budgets
- Coordinate cross-functional teams (design, production, quality)
- Track project progress and resolve issues
- Ensure timely tool development and delivery
- Communicate with stakeholders and clients

Required Skills

- Project management and planning
- Tooling and manufacturing knowledge
- Leadership and communication
- Risk management and problem-solving

Qualification

- B.E / B.Tech in Mechanical / Production (MBA preferred)

Experience

- 6–12 years

Salary (India)

- ₹60,000 – ₹1,50,000 per month
-

53. Manufacturing Manager (Tooling)

Job Summary

Oversees manufacturing operations related to tooling, ensuring efficiency, quality, and cost-effectiveness.

Key Responsibilities

- Manage tooling manufacturing processes
- Optimize production efficiency and output
- Implement lean manufacturing practices
- Monitor KPIs and performance metrics
- Lead cross-functional teams
- Ensure compliance with safety and quality standards

Required Skills

- Manufacturing operations expertise
- Leadership and strategic thinking
- Process improvement and lean principles
- Data-driven decision-making

Qualification

- B.E / B.Tech in Mechanical / Production

Experience

- 10–18 years

Salary (India)

- ₹70,000 – ₹1,80,000 per month
-

54. Operations Manager (Tool Room)

Job Summary

Responsible for overall operations of the tool room, including production, maintenance, quality, and logistics.

Key Responsibilities

- Oversee daily and long-term operations
- Manage production planning and execution
- Ensure tool availability and maintenance
- Optimize resource utilization and costs
- Lead teams and improve operational efficiency
- Drive continuous improvement initiatives

Required Skills

- Operations and production management
- Leadership and team development
- Analytical and decision-making skills
- Process optimization

Qualification

- B.E / B.Tech in Mechanical / Production (MBA preferred)

Experience

- 10–20 years

Salary (India)

- ₹80,000 – ₹2,00,000 per month

55. Progressive Die Specialist

Job Summary

Expert in designing, manufacturing, and maintaining progressive dies used in high-volume sheet metal production.

Key Responsibilities

- Develop and maintain progressive dies
- Optimize strip layout and die stages
- Conduct die trials and performance tuning
- Troubleshoot multi-stage die issues
- Improve die life and reduce downtime
- Collaborate with design and production teams

Required Skills

- Advanced knowledge of progressive die design and operation
- Sheet metal forming expertise
- Strong troubleshooting and analytical skills
- Precision measurement and GD&T knowledge

Qualification

- Diploma / B.E / B.Tech in Mechanical / Tool & Die

Experience

- 6–10 years

Salary (India)

- ₹40,000 – ₹90,000 per month
-

56. High-Precision Tool Maker

Job Summary

Specializes in manufacturing ultra-precision tools and components with tight tolerances and superior surface finishes.

Key Responsibilities

- Manufacture high-precision tooling components
- Perform advanced machining and grinding operations
- Achieve micron-level tolerances
- Inspect components using precision instruments
- Ensure high-quality finishing and polishing
- Support critical tooling applications

Required Skills

- Advanced machining and grinding expertise
- Knowledge of high-precision measurement tools
- Understanding of materials and heat treatment
- Strong attention to detail

Qualification

- ITI / Diploma in Tool & Die / Machinist

Experience

- 5–10 years

Salary (India)

- ₹35,000 – ₹80,000 per month
-

57. Micro Tooling Specialist

Job Summary

Focuses on manufacturing miniature tooling components used in electronics, medical devices, and precision industries.

Key Responsibilities

- Manufacture micro-scale tools and components
- Use micro-machining and EDM techniques
- Handle delicate and high-precision materials
- Perform micro-level inspection and measurement
- Ensure high accuracy and repeatability

Required Skills

- Micro-machining and EDM expertise
- Knowledge of precision measurement techniques
- High attention to detail and steady handling
- Understanding of advanced materials

Qualification

- Diploma / B.E in Mechanical / Tool & Die

Experience

- 5–9 years

Salary (India)

- ₹40,000 – ₹85,000 per month
-

58. Automotive Tooling Engineer

Job Summary

Designs and develops tooling solutions for automotive component manufacturing.

Key Responsibilities

- Develop tooling for automotive parts (sheet metal, plastic, casting)
- Coordinate with product design and production teams
- Ensure compliance with automotive quality standards
- Optimize tooling for mass production
- Support tool trials and production ramp-up

Required Skills

- Knowledge of automotive manufacturing processes

- Tool design and development expertise
- Familiarity with industry standards (IATF, etc.)
- Problem-solving and analytical skills

Qualification

- B.E / B.Tech in Mechanical / Automobile

Experience

- 4–8 years

Salary (India)

- ₹40,000 – ₹90,000 per month
-

59. Aerospace Tooling Specialist

Job Summary

Develops and manages tooling used in aerospace manufacturing, ensuring high precision and compliance with strict standards.

Key Responsibilities

- Design and develop aerospace tooling
- Ensure compliance with aerospace standards (AS9100, etc.)
- Perform high-precision inspections and validations
- Support production and assembly processes
- Maintain documentation and traceability

Required Skills

- Knowledge of aerospace materials and processes
- High-precision machining and inspection expertise
- Strong documentation and compliance knowledge
- Analytical and problem-solving skills

Qualification

- B.E / B.Tech in Mechanical / Aerospace

Experience

- 5–10 years

Salary (India)

- ₹50,000 – ₹1,00,000 per month
-

60. Plastic Mold Specialist

Job Summary

Specializes in design, manufacturing, and optimization of molds for plastic components.

Key Responsibilities

- Design and develop plastic injection molds
- Optimize cooling, gating, and ejection systems
- Troubleshoot molding defects
- Conduct mold trials and improvements
- Improve mold performance and cycle time

Required Skills

- Injection molding and mold design expertise
- Knowledge of plastics materials
- Mold flow analysis (preferred)
- Problem-solving skills

Qualification

- Diploma / B.E / B.Tech in Mechanical / Plastics

Experience

- 4–9 years

Salary (India)

- ₹40,000 – ₹85,000 per month
-

61. Hot Runner System Specialist

Job Summary

Handles design, maintenance, and optimization of hot runner systems used in injection molding processes.

Key Responsibilities

- Design and maintain hot runner systems
- Optimize temperature control and flow

- Troubleshoot heating and flow issues
- Support mold trials and production
- Ensure system efficiency and reliability

Required Skills

- Knowledge of hot runner systems and injection molding
- Thermal management expertise
- Troubleshooting skills
- Understanding of plastics processing

Qualification

- Diploma / B.E / B.Tech in Mechanical / Plastics

Experience

- 5–10 years

Salary (India)

- ₹45,000 – ₹95,000 per month
-

62. Cold Forging Tooling Engineer

Job Summary

Designs and develops tooling for cold forging processes used in high-strength metal component manufacturing.

Key Responsibilities

- Design and develop cold forging dies and tools
- Analyze material flow and deformation
- Optimize tooling for durability and efficiency
- Troubleshoot forging defects
- Support production and tool trials

Required Skills

- Knowledge of forging processes and material behavior
- Tool design and analysis expertise
- Problem-solving and analytical skills
- Understanding of heat treatment

Qualification

- B.E / B.Tech in Mechanical / Production

Experience

- 4–9 years

Salary (India)

- ₹40,000 – ₹90,000 per month

63. Tool Installation Engineer

Job Summary

Responsible for installing tools, dies, molds, and fixtures at production sites, ensuring proper setup and readiness for operation.

Key Responsibilities

- Install and align tools, dies, and molds on machines
- Verify setup parameters and operational readiness
- Coordinate with production and maintenance teams
- Conduct initial test runs and adjustments
- Ensure safety and quality compliance
- Provide basic operator training during installation

Required Skills

- Knowledge of tool setup and alignment
- Understanding of machining and production equipment
- Troubleshooting and problem-solving skills
- Communication and coordination

Qualification

- Diploma / B.E / B.Tech in Mechanical / Tool & Die

Experience

- 2–5 years

Salary (India)

- ₹25,000 – ₹50,000 per month
-

64. Mold Trial Engineer

Job Summary

Conducts mold trials to validate mold performance and ensure production readiness.

Key Responsibilities

- Perform mold trials on injection/blow molding machines
- Optimize process parameters (temperature, pressure, cycle time)
- Identify and resolve molding defects
- Coordinate with design and production teams
- Prepare trial reports and recommendations
- Support production ramp-up

Required Skills

- Injection/blow molding process knowledge
- Mold troubleshooting expertise
- Data analysis and reporting
- Problem-solving skills

Qualification

- B.E / B.Tech in Mechanical / Plastics

Experience

- 3–6 years

Salary (India)

- ₹30,000 – ₹65,000 per month
-

65. Tool Commissioning Engineer

Job Summary

Responsible for commissioning new tools and ensuring they perform as per design specifications in production environments.

Key Responsibilities

- Execute tool commissioning plans
- Conduct performance testing and validation
- Fine-tune tools for optimal performance
- Troubleshoot issues during commissioning
- Coordinate with cross-functional teams
- Document commissioning results

Required Skills

- Tooling and production process knowledge
- Troubleshooting and analytical skills
- Understanding of quality standards
- Project coordination

Qualification

- B.E / B.Tech in Mechanical / Production

Experience

- 3–7 years

Salary (India)

- ₹35,000 – ₹70,000 per month
-

66. Field Service Engineer (Tooling)

Job Summary

Provides on-site technical support, maintenance, and troubleshooting services for tooling at customer locations.

Key Responsibilities

- Visit customer sites for tool installation and service
- Diagnose and resolve tooling issues
- Perform maintenance and repairs
- Provide technical guidance to customers
- Maintain service records and reports
- Ensure customer satisfaction

Required Skills

- Strong troubleshooting and repair skills
- Knowledge of tooling and production processes
- Communication and customer-handling skills
- Willingness to travel

Qualification

- Diploma / B.E / B.Tech in Mechanical / Tool & Die

Experience

- 2–6 years

Salary (India)

- ₹25,000 – ₹60,000 per month (plus travel allowances)
-

67. After-Sales Tooling Support Engineer

Job Summary

Handles post-installation support, maintenance, and customer service for tooling solutions.

Key Responsibilities

- Provide technical support after tool delivery
- Handle customer complaints and service requests
- Coordinate maintenance and repair activities
- Ensure timely resolution of issues
- Maintain service documentation
- Build long-term customer relationships

Required Skills

- Customer support and communication
- Tooling and maintenance knowledge
- Problem-solving and coordination
- Documentation and reporting

Qualification

- Diploma / B.E / B.Tech in Mechanical

Experience

- 2–5 years

Salary (India)

- ₹25,000 – ₹55,000 per month

68. Tooling Consultant

Job Summary

Provides expert advice on tooling design, manufacturing, maintenance, and optimization to improve productivity and reduce costs.

Key Responsibilities

- Analyze existing tooling systems and processes
- Recommend improvements in tool design and performance
- Support troubleshooting of complex tooling issues
- Advise on material selection and tooling strategies
- Conduct audits and prepare technical reports
- Guide tool room teams and train staff

Required Skills

- Deep knowledge of tooling processes and applications
- Strong analytical and problem-solving skills
- Communication and presentation skills
- Cost optimization and process improvement expertise

Qualification

- Diploma / B.E / B.Tech in Mechanical / Tool & Die

Experience

- 8–15+ years

Earnings (India)

- ₹1,000 – ₹5,000 per hour
- ₹50,000 – ₹3,00,000 per project (depending on scope)

69. Die Design Consultant

Job Summary

Specializes in consulting for die design, including strip layout, forming analysis, and production optimization.

Key Responsibilities

- Design and review die concepts and layouts
- Optimize strip layout for material utilization
- Conduct feasibility studies
- Support die trials and debugging
- Provide technical guidance to design teams
- Review and approve die designs

Required Skills

- Advanced die design expertise
- Knowledge of sheet metal forming
- CAD software proficiency (CATIA, NX, SolidWorks)

- Analytical and troubleshooting skills

Qualification

- B.E / B.Tech in Mechanical

Experience

- 8–15+ years

Earnings (India)

- ₹1,500 – ₹6,000 per hour
 - ₹75,000 – ₹4,00,000 per project
-

70. Mold Design Consultant

Job Summary

Provides expert consulting on mold design for plastic components, focusing on performance, quality, and cost efficiency.

Key Responsibilities

- Design and review injection/blow molds
- Optimize cooling, gating, and ejection systems
- Conduct mold flow analysis (if required)
- Support mold trials and improvements
- Improve cycle time and product quality
- Guide mold design teams

Required Skills

- Mold design and plastic processing expertise
- CAD tools (NX, Creo, SolidWorks)
- Mold flow analysis knowledge
- Problem-solving skills

Qualification

- B.E / B.Tech in Mechanical / Plastics

Experience

- 8–15+ years

Earnings (India)

- ₹1,500 – ₹6,000 per hour
 - ₹1,00,000 – ₹5,00,000 per project
-

71. Tool Room Setup Consultant

Job Summary

Helps organizations establish or upgrade tool rooms, including layout planning, machine selection, and workflow optimization.

Key Responsibilities

- Design tool room layout and infrastructure
- Recommend machines, tools, and equipment
- Develop workflow and process standards
- Assist in vendor selection and procurement
- Train staff and establish best practices
- Ensure safety and compliance standards

Required Skills

- Tool room operations expertise
- Layout planning and process design
- Knowledge of machinery and equipment
- Project planning and execution

Qualification

- Diploma / B.E / B.Tech in Mechanical

Experience

- 10–20+ years

Earnings (India)

- ₹2,000 – ₹8,000 per hour
 - ₹2,00,000 – ₹10,00,000 per project
-

72. Manufacturing Process Consultant (Tooling)

Job Summary

Advises on optimizing manufacturing processes related to tooling for better efficiency, quality, and cost reduction.

Key Responsibilities

- Analyze manufacturing processes and workflows
- Identify inefficiencies and recommend improvements
- Implement lean manufacturing and process optimization
- Improve tooling utilization and productivity
- Conduct process audits and training
- Support digital transformation initiatives

Required Skills

- Process engineering and lean manufacturing expertise
- Data analysis and problem-solving
- Knowledge of tooling and machining processes
- Strong communication and consulting skills

Qualification

- B.E / B.Tech in Mechanical / Production (MBA preferred)

Experience

- 8–18+ years

Earnings (India)

- ₹2,000 – ₹7,000 per hour
 - ₹1,50,000 – ₹8,00,000 per project
-

73. Freelance Tool Designer

Job Summary

Works independently to design tools, dies, molds, jigs, and fixtures for clients across industries.

Key Responsibilities

- Create 2D drawings and 3D models
- Design tools, dies, and molds as per client requirements
- Modify and optimize existing designs
- Coordinate with clients and manufacturers
- Deliver designs within deadlines
- Maintain design documentation

Required Skills

- CAD software expertise (SolidWorks, NX, CATIA, Creo)
- Strong design and visualization skills
- Knowledge of manufacturing processes
- Time management and client handling

Qualification

- Diploma / B.E / B.Tech in Mechanical

Experience

- 3–10+ years

Earnings (India)

- ₹500 – ₹3,000 per hour
- ₹20,000 – ₹2,00,000 per project

74. Digital Tooling Engineer

Job Summary

Integrates digital technologies into tooling design, manufacturing, and maintenance to improve efficiency, traceability, and performance.

Key Responsibilities

- Implement digital tools for tooling lifecycle management
- Integrate CAD/CAM, PLM, and IoT systems
- Monitor tool performance using digital dashboards
- Improve data visibility and traceability
- Support digital transformation initiatives
- Collaborate with IT and manufacturing teams

Required Skills

- CAD/CAM and PLM systems knowledge
- Basic IoT and data analytics understanding
- Tooling and manufacturing process expertise
- Problem-solving and digital mindset

Qualification

- B.E / B.Tech in Mechanical / Mechatronics / Production

Experience

- 3–7 years

Salary (India)

- ₹40,000 – ₹90,000 per month
-

75. Smart Manufacturing Tooling Engineer

Job Summary

Develops and manages smart tooling systems integrated with Industry 4.0 technologies for automated and optimized production.

Key Responsibilities

- Implement smart tooling solutions with sensors and automation
- Integrate tooling with MES and smart factory systems
- Monitor real-time tool performance
- Improve production efficiency using automation
- Support predictive maintenance initiatives
- Collaborate with automation and production teams

Required Skills

- Knowledge of Industry 4.0 technologies
- Automation and sensor integration
- Manufacturing process expertise
- Data analysis and problem-solving

Qualification

- B.E / B.Tech in Mechanical / Mechatronics / Automation

Experience

- 3–8 years

Salary (India)

- ₹45,000 – ₹1,00,000 per month
-

76. AI-Based Tool Design Engineer

Job Summary

Uses artificial intelligence and machine learning to optimize tool design, performance, and manufacturing processes.

Key Responsibilities

- Develop AI-driven tool design models
- Optimize tooling parameters using data analysis
- Automate design processes
- Analyze historical data for design improvements
- Collaborate with data science and engineering teams
- Implement predictive design solutions

Required Skills

- AI/ML fundamentals (Python, data modeling)
- CAD and tooling design expertise
- Data analysis and algorithm understanding
- Problem-solving and innovation

Qualification

- B.E / B.Tech in Mechanical / AI / Data Science

Experience

- 3–8 years

Salary (India)

- ₹50,000 – ₹1,20,000 per month
-

77. Additive Manufacturing Tooling Engineer

Job Summary

Designs and develops tooling using additive manufacturing (3D printing) technologies.

Key Responsibilities

- Design tools for additive manufacturing processes
- Select appropriate materials and printing technologies
- Optimize designs for lightweight and performance
- Conduct trials and validations
- Integrate additive and traditional tooling methods
- Improve tooling lead time and cost

Required Skills

- Knowledge of additive manufacturing technologies
- CAD and topology optimization
- Material science understanding
- Problem-solving and innovation

Qualification

- B.E / B.Tech in Mechanical / Manufacturing

Experience

- 3–7 years

Salary (India)

- ₹45,000 – ₹1,00,000 per month
-

78. Hybrid Manufacturing Engineer (Additive + Machining)

Job Summary

Combines additive manufacturing and traditional machining processes to develop advanced tooling solutions.

Key Responsibilities

- Develop hybrid manufacturing strategies
- Integrate 3D printing with CNC machining
- Optimize processes for cost and efficiency
- Improve tool performance and durability
- Conduct trials and validations
- Collaborate with cross-functional teams

Required Skills

- Knowledge of both additive and machining processes
- CNC and CAD/CAM expertise
- Process optimization skills
- Analytical thinking

Qualification

- B.E / B.Tech in Mechanical / Production

Experience

- 4–8 years

Salary (India)

- ₹50,000 – ₹1,10,000 per month
-

79. Simulation Engineer (Tooling & Die Analysis)

Job Summary

Uses simulation software to analyze tooling performance, material flow, and stress to optimize designs before manufacturing.

Key Responsibilities

- Perform simulation for dies, molds, and tooling
- Analyze stress, strain, and material flow
- Optimize tool design and performance
- Reduce trial-and-error in production
- Generate simulation reports
- Support design and development teams

Required Skills

- Simulation software (ANSYS, Abaqus, AutoForm, Moldflow)
- Strong understanding of material behavior
- Analytical and problem-solving skills
- Knowledge of tooling processes

Qualification

- B.E / B.Tech in Mechanical / Production

Experience

- 3–7 years

Salary (India)

- ₹45,000 – ₹1,00,000 per month
-

80. Data-Driven Tooling Analyst

Job Summary

Analyzes tooling and production data to improve efficiency, reduce downtime, and enhance decision-making.

Key Responsibilities

- Collect and analyze tooling performance data
- Develop dashboards and reports
- Identify trends and improvement opportunities
- Support predictive maintenance strategies
- Work with digital and production teams
- Drive data-based decision-making

Required Skills

- Data analysis tools (Excel, Python, Power BI)
- Understanding of manufacturing processes
- Analytical thinking
- Problem-solving skills

Qualification

- B.E / B.Tech in Mechanical / Data Analytics

Experience

- 2–6 years

Salary (India)

- ₹40,000 – ₹90,000 per month
-

81. Digital Twin Tooling Engineer

Job Summary

Creates and manages digital twins of tooling systems to simulate, monitor, and optimize real-world performance.

Key Responsibilities

- Develop digital twin models of tools and processes
- Integrate real-time data from sensors
- Simulate tool performance and predict failures
- Optimize maintenance and production strategies

- Collaborate with digital and manufacturing teams
- Improve tool lifecycle management

Required Skills

- Digital twin and simulation knowledge
- IoT and data integration
- CAD and modeling expertise
- Analytical and problem-solving skills

Qualification

- B.E / B.Tech in Mechanical / Mechatronics / Digital Engineering

Experience

- 4–8 years

Salary (India)

- ₹50,000 – ₹1,20,000 per month
